Module 9: Project 5

## **<u>Project 5 Summary</u>**

For this project I used safari to test my webpage. To edit the bootstrap template I used Visual Studio code.  I used a bootstrap template I found online to do my project. The first thing I did was change the content on the page to display the words I wanted. For example the title of the page I changed it to "Hi my name is Michelle Vieira"I then deleted some parts of the webpage code to make the appearance of my web page look how I wanted. For example, the template had an area for the user to input their information such as their phone number and email but I decided to delete that. I then used href to link each section to the project I made. I made sure to put each project folder within the project 5 folder for the projects to show up. For example for project 1 I used, href="./project1/index.html" to access my project 1. After I got each section to direct to the project I wanted, I decided to also href the projects using the menu bar. The menu bar has all my projects as well as the sections on the webpage. I then decided I wanted to change the color scheme of the webpage. I decided to make each section on the web page a different shade of purple. I also changed certain text on the web page to be purple when the mouse hovers on the text. At the bottom of the webpage there is a footer section that allows the user to directly access my social media. I decided to delete the links that direct to Twitter, Instagram and Youtube. I did keep the GitHUb and LinkedIn options. I then went into the HTML file and used href to link directly to my GitHub and LinkedIn page when the user clicks on the icons. When the user hovers over the GitHub and LinkedIn icons, the icon should turn blue.
